Explanation of Symbols used : C—Cases ; D—Deaths

NEW DELHI 3 (INDIA) ;
The 30th October, 1950.

S. P. JAIN,
for Registrar General, India

NATIONAL SAVINGS CERTIFICATES

Are now available in three different series, maturing after 5, 7 and 12 years. The certificates yield 3%, 3½% and 4-1/6% simple interest respectively, at maturity. The 12 years certificates increase your money by 50% but if necessary can be encashed after 18 months (Rs. 5/- certificates after 12 months). The 5 and 7 years certificates can be encashed at any time.

National Savings Certificates are obtainable in denominations of 5, 10, 50, 100, 500, 1,000 and 5,000 and you can invest upto Rs. 25,000 in them (inclusive of any Post Office cash certificates held).

Full particulars obtainable from all post offices, District Organisers of the Small-Savings Scheme, Assistant National Savings Officers, Provincial National Savings Officers or the National Savings Commissioner, Simla.

TODAY'S SAFEST AND MOST PROFITABLE INVESTMENT

Births and deaths from principal diseases in towns with a population of over 30,000 in India for the week ending the 7th October, 1950

* In cases of towns where there has been an abnormal movement of population, it is likely that the population estimates may not be sufficiently reliable for calculating the birth and death rates.

† Figures not available

Explanation of symbols used :— B.=Births B. R.=Birth rate ; C.=Cholera ; S.=Smallpox P.=Plague ; F.=Fever ; D. D.=Dysentery and Diarrhoea ; R. D.=Respiratory Diseases ; M. D.=Maternal Deaths ; D. R.=Death Rate ; I. D.=Infantile Deaths (included in total deaths).

REMARKS

The figures of births and deaths shown in this statement for the week ending the 7th October, 1950, relate to 71 towns with an estimated population of 9,694 thousands. The total number of towns is 233 and their population is 28,421 thousands. Thus 30% of the total number of towns representing 34% of the total population is covered in this statement. The numbers of births and deaths recorded in these towns were 7,740 and 3,100 representing birth and death rates of 41.5 and 16.6 per thousand of population respectively.

(A) *States (Parts A and C).*—The data here relate to 53 towns with an estimated population of 7,148 thousands. Information about Assam, Bihar, Bombay, Madhya Pradesh, Madras, Orissa and West Bengal could not be included. The total number of towns is 201 and their population is 24,668 thousands. Thus 26% of the total number of towns representing 29% of the total population is covered. The numbers of births and deaths recorded

in these towns were 5,885 and 2,304 representing birth and death rates of 42.8 and 16.8 per thousand of population respectively. The table at the end gives the position by states.

No town recorded a high death rate of 50 or over per thousand of population.

(B) *States (Part B).*—The data here relate to 18 towns with an estimated population of 2,546 thousands. The total number of towns is 32 and their population is 3,753 thousands. Thus 56% of the total number of towns representing 71% of the total population is covered. The numbers of births and deaths recorded in these towns were 1,855 and 796 representing birth and death rates of 37.9 and 16.3 per thousand of population respectively.

Rajkot in Saurashtra was the only town which had a high death rate of 56.3 per thousand of population and this high death rate was largely due to deaths from typhoid fever.
